COURSE CODE: PRAC101 Section: BSIT - 4203

COURSE TITLE: OJT / PRACTICUM 1

TERM: 2nd Semester, SY 2026-2027

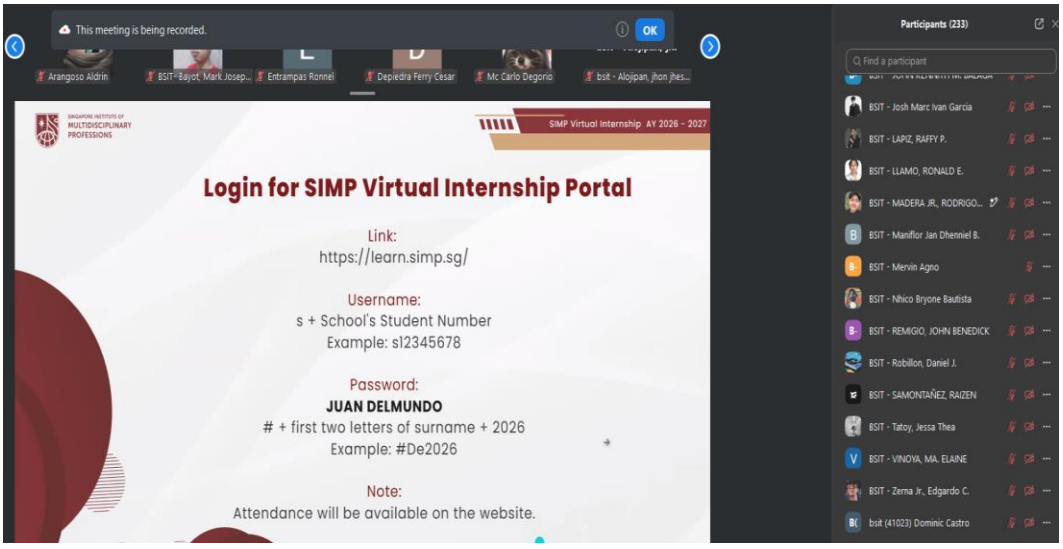

PROFESSOR: MR. EMERSON D. GELERA

NAME OF STUDENT: AGNO, JOHN MERVIN I.

OJT NARRATIVE REPORT

A. TOPIC: SIMP VIRTUAL INTERNSHIP ORIENTATION
B. SPEAKER: MR. MARC TONIDO
C. DURATION: 8:30-9:30 AM

D. SCREENSHOT OF DUTY

E. REFLECTION

SIMP VIRTUAL INTERNSHIP ORIENTATION

Attending the virtual internship orientation gave me a clearer picture of what the next few months will look like, and I left the session more excited than nervous, which surprised me a little. The focus on web development set the tone right away. Hearing the team walk through the tech stack, project structure, and expectations for collaboration made the internship feel tangible rather than abstract. I appreciated that they didn't just list tools and frameworks but explained why each one mattered to the kind of work we'd actually be doing, which made the technical side feel approachable instead of overwhelming.

What stood out most, though, was how much emphasis was placed on AI utilization as part of the daily workflow. Rather than treating AI tools as a shortcut or an afterthought, the orientation framed them as something to be used thoughtfully, almost like another skill to develop alongside coding itself. Learning how the team integrates AI into debugging, documentation, and even early-stage planning reshaped how I think about productivity. It's not about letting a tool do the thinking, but about knowing when and how to lean on it so I can focus energy on the parts of a project that genuinely need human judgment. I also found the orientation valuable simply as an introduction to the culture of the team. The pace was clear but not rushed, and there was room for questions, which made me feel like curiosity was welcomed rather than tolerated. Virtual formats can sometimes feel distant, but the structure of this one, with its mix of live walkthroughs and time for informal questions, made it feel surprisingly personal.

Overall, this orientation didn't just prepare me logistically. It shifted my mindset going into the internship, reminding me that growth here will come from balancing technical skill-building with intentional, thoughtful use of the tools now shaping the field.
